

People Management — Frameworks Cheat Sheet

Essay-ready. Six blocks, 87 frameworks. Cite by name + author + the move it gives you.

How to use

- **Core** ★★★★★ — essay anchors. Every long answer should rest on at least one of these.
- **Key** ★★★★★ — strong supporting cites. Use to add nuance or a second voice.
- **Supporting** ★★★ — exam-detail level. Drop in to show range.
- One-line italic under the name = the **one-breath argument** to lead with.
- Bullets = the **moves** (what to actually write in the essay).

Block 1 • Foundations: SHRM, the HR system, engagement & commitment

● Harvard Model of HRM • S2 • Beer, Spector, Lawrence, Mills & Walton (1984) ★★★★★

A multi-stakeholder map: situational forces + stakeholder interests shape HR policy choices → HR outcomes → long-term well-being.

- **Inputs** — situational factors (workforce, strategy, technology, laws, market) + stakeholder interests (shareholders, employees, unions, community, government)
- **Four HR policy areas** — employee influence, HR flow, reward systems, work systems
- **Four C's (HR outcomes)** — Commitment, Competence, Congruence, Cost-effectiveness
- **Long-term consequences** — individual well-being, organizational effectiveness, societal well-being
- **Exam move** — the lens to redesign whole HR systems (Ryanair); pair with [[multistakeholder]] critique of shareholder-only HR

● AMO Model • S1 • Ability–Motivation–Opportunity ★★★★★

Performance = f(Ability × Motivation × Opportunity). If any factor is zero, performance is zero.

- **Ability** — built by HR Flow (recruit, select, train, develop)
- **Motivation** — built by Performance Management (goals, feedback, recognition)
- **Opportunity** — built by Compensation + work design (resources, structure, autonomy)
- **Exam move** — the spine of the whole course; diagnose any HR failure as an A, M or O gap

● HR System / Employee Journey • S1 • S2 ★★★★★

HRM = three activity blocks staged across the employee lifecycle.

- **HR Flow** — planning → recruitment → selection → onboarding → development → exit
- **Performance Management** — set goals, measure, feedback, develop
- **Compensation** — base pay, incentives, benefits, recognition
- **Lifecycle frame** — Recruit & Hire → Onboard → Engage → Develop → Progress → Exit
- **Exam move** — organizing backbone; structure any "design an HR system" answer along this arc

● **Total Motivation (ToMo) • S3 • Doshi & McGregor (HBR) ★★★★★**

Six why-people-work motives; the direct three lift performance, the indirect three destroy it.

- **Direct (boost performance)** — Play, Purpose, Potential
- **Indirect (kill performance)** — Emotional pressure, Economic pressure, Inertia
- **ToMo score** — weighted index (-100 to +100), predicts customer outcomes
- **Exam move** — cite when explaining culture-as-performance-engine; contrast with extrinsic-only [[michigan-model]]

● **Work Engagement Model • S3 • Schaufeli & Bakker (2004) ★★★★★**

Engagement = a positive, fulfilling work-state with three dimensions.

- **Vigor** — energy, resilience, willingness to invest effort
- **Dedication** — enthusiasm, inspiration, pride, significance
- **Absorption** — concentration, time-flies, fascination
- **Distinction** — engagement = state; commitment = attitude/bond
- **Exam move** — use to define engagement crisply before discussing drivers

● **Three-Component Commitment Model • S3 • Meyer & Allen (1991) ★★★★★**

Three reasons employees stay — only one is genuinely "good".

- **Affective** — want to stay (emotional attachment) → best outcomes
- **Normative** — feel obliged to stay (loyalty/duty) → mixed
- **Continuance** — need to stay (cost of leaving) → worst outcomes
- **Exam move** — argue HRM should build affective commitment; continuance traps people

● **Michigan Model / HR Cycle • S2 • Fombrun, Tichy & Devanna (1984) ★★★★★**

Hard, "matching" HRM: align mission/strategy/structure with a tight HR cycle for shareholder value.

- **The cycle** — Selection → Appraisal → Rewards → Development
- **Logic** — instrumental, performance- and shareholder-driven
- **Exam move** — the foil to Harvard; "soft" Harvard vs "hard" Michigan is the classic essay debate

● **Self-Determination Theory • S3 • Deci & Ryan (1985) ★★★★★**

Intrinsic motivation thrives when three needs are met.

- **Autonomy** — control over how you work
- **Competence** — feeling effective at challenging tasks
- **Relatedness** — meaningful connection to others
- **Exam move** — theoretical scaffolding under [[tomo]] and engagement; cite to explain why practices work

● Conservation of Resources (COR) • S3 • Hobfoll (1989) ★★★★★

People invest in, protect and grow valued resources; resource gains compound, losses spiral.

- **Resource gain spiral** — high-commitment HR practices give resources, employees reinvest them
- **Resource loss spiral** — burnout, turnover when resources drain
- **Exam move** — explain how positive HR practices snowball into engagement

● Social Exchange Theory • S3 • Cropanzano & Mitchell (2005) ★★★★★

Employer-employee relationship = reciprocal exchange of obligations and benefits.

- **Norm of reciprocity** — give support, get effort back (and vice versa)
- **Exam move** — explains why perceived organizational support → engagement → discretionary effort

● Multistakeholder HRM • S2 • Beer, Boselie & Brewster (2015) ★★★★★

HRM should serve shareholders, employees, unions, community AND government — not only shareholders.

- **Critique** — RBV/strategic HRM has narrowed to firm-only outcomes
- **Argument** — balance economic, individual and societal well-being
- **Exam move** — the assigned reading's thesis; pair with [[harvard-model]] for the values argument

● Perceived Organizational Support (POS) • S3 ★★★★★

Engagement/commitment rise when employees perceive the org cares about them.

- **Antecedents** — job characteristics, organizational justice, recognition/rewards, leadership, psychological safety
- **Exam move** — identifies the HR levers that build engagement; concrete checklist for redesign

● Strategic HRM: Vertical & Horizontal Fit • S2 ★★★★★

HRM = behaviour design serving business strategy; must be doubly aligned.

- **Vertical fit** — HR practices match business strategy
- **Horizontal fit** — HR practices reinforce each other (no contradictions)
- **Exam move** — diagnose Ryanair: low-cost strategy → tight cost HR (horizontal fit); is it ethical (vertical critique)?

● Unethical Pro-Organizational Behavior (UPB) • S3 ★★★★★

Highly committed employees may lie/cheat to benefit the firm.

- **Examples** — concealing defects, misleading customers, fudging numbers
- **Exam move** — the dark side of strong commitment; cite to balance the engagement narrative

● **Best Workplace on Earth (DREAMS) · S3 · Goffee & Jones (HBR 2013) ★★★**

Six attributes of the ideal organization to work for.

- **Differences** — you can be yourself
- **Radical honesty** — you're told what's really going on
- **Extra value** — your strengths are magnified
- **Authenticity** — the company stands for something meaningful
- **Meaning** — daily work is rewarding
- **Simple rules** — no stupid rules
- **Exam move** — practical checklist for "what makes an engaging workplace"

● **Strategic Fitness Process · S2 · Beer & Eisenstat ★★★**

Structured intervention letting employees "speak truth to power" about strategy/values alignment.

- **Mechanism** — surfaces the barriers to change that hierarchy hides
- **Exam move** — operationalizes the "employee voice" principle of Harvard

● **Resource-Based View / Human Capital · S2 ★★★**

People = sustained competitive advantage; invest in them like any other asset.

- **Logic** — valuable, rare, inimitable, organized (VRIO) human capital wins
- **Exam move** — the universalist paradigm that Beer/Boselie/Brewster critique as too firm-centric

Block 2 · Job design, analysis, competencies, workforce planning, recruit & select

● **Four Spans of Job Design · S4 · Simons (HBR) ★★★★★**

Design jobs so the supply of resources matches the demand on the role — an "X" of crossing sliders.

- **Span of Control** — resources commanded (people, assets) → **supply**
- **Span of Support** — help available from others → **supply**
- **Span of Accountability** — range of metrics measured → **demand**
- **Span of Influence** — breadth of cross-unit cooperation needed → **demand**
- **Diagnostic** — sliders form an X when supply = demand; misalignment = crisis (resources / control / red tape)
- **Exam move** — the central Block-2 tool; diagnose any "broken role" by mapping the four sliders

● Job Characteristics Model / MPS • S5 • Hackman & Oldham ★★★★★

Five job features create three psychological states that drive motivation, satisfaction and effectiveness.

- **Five core characteristics** — skill variety, task identity, task significance, autonomy, feedback
- **Three psychological states** — meaningfulness, responsibility, knowledge of results
- **MPS formula** — $((\text{Variety} + \text{Identity} + \text{Significance}) / 3) \times \text{Autonomy} \times \text{Feedback}$
- **Exam move** — use to argue *why* enrichment beats narrow specialization; assess fit for Ricci/Verona

● Competency Model / KSAOs • S5 • Campion et al. (2011) ★★★★★

A competency = the knowledge, skills, abilities and other characteristics needed for effective performance.

- **K** — knowledge (what you know)
- **S** — skills (what you can do)
- **A** — abilities (cognitive/physical capacity)
- **O** — other (personality, motives, values)
- **Types** — technical competencies + leadership/behavioural competencies
- **Exam move** — the bedrock of the job description; drives selection criteria and gap analyses

● Job Analysis: Job Description vs Job Specification • S5-S6 ★★★★★

Systematic process splitting what the job is from what the holder must be.

- **Job Description** — title, duties, responsibilities, reporting line, environment
- **Job Specification** — education, experience, skills, KSAOs, personal characteristics
- **Exam move** — starting point for recruitment; without it, selection has no criteria

● Workforce Planning • S6 • Demand vs Supply ★★★★★

Right person, right job, right time, right cost — by balancing labor demand and labor supply.

- **Step 1** — analyse current workforce
- **Step 2** — forecast future demand (strategy-driven)
- **Step 3** — forecast future supply (internal + external labour market)
- **Step 4** — close the gap (hire / develop / outsource / downsize)
- **Demand > Supply** — recruit externally, train, retain, overtime
- **Demand < Supply** — hiring freeze, redeployment, voluntary exits, layoffs
- **Exam move** — frame for PowerTech India (growth) and SolidTech (downsize) cases

● Recruitment Process Model • S6 • Lepak & Gowan ★★★★★

A cycle: plan → strategy → source → method → feedback.

- **Steps** — HR planning → recruitment strategy → evaluate sources → implement methods → feedback & control
- **Internal sources** — promotions, referrals, internal job postings; low cost, cultural fit, but creates new vacancy
- **External sources** — ads, agencies, social media, campus; fresh skills, costly, less performance data
- **Exam move** — structure any "how should we fill role X" question

● Selection Process Model · S6 · Armstrong ★★★★★

Six steps from application to offer, predicting future performance.

- **Steps** — application forms → selection tests → interviews → references → physical exam → offer
- **Methods** — structured/unstructured interviews, situational vs behavioural questions, ability/personality tests
- **Predictive validity** — structured interviews > unstructured; ability tests > grades
- **Exam move** — defends *why* the process must be valid and reliable; cite Cappelli (2019) on weak predictors

● AMO (Blumberg & Pringle, 1982) · S4 ★★★★★

Performance is multiplicative: a great person in a bad job still fails.

- **Implication** — job design (the O) can override individual ability/motivation
- **Exam move** — defend a job-redesign intervention over training/hiring

● Situational vs Behavioral Interviewing (+ STAR) · S6 · Latham & Sue-Chan (1996) ★★★★★

Two structured-question typologies; STAR structures the answers.

- **Situational** — "What would you do if...?" → tests intentions/cognitive ability; best for inexperienced candidates
- **Behavioural** — "Tell me about a time when..." → past behaviour predicts future; best for experienced
- **STAR** — Situation → Task → Action → Result
- **Exam move** — pick by candidate experience; STAR boosts validity

● RACI Framework · S4 ★★★★★

Roles-and-responsibilities matrix to clarify decision rights.

- **Responsible** — does the work
- **Accountable** — single owner, signs off (only one A per task)
- **Consulted** — two-way input before the decision
- **Informed** — one-way notification after
- **Exam move** — apply when redesigning jobs or delegating; eliminates "who owns this?" friction

● Job Breadth Interventions · S5 ★★★★★

Four levers to widen or deepen a job.

- **Enrichment** — vertical: more autonomy, responsibility, challenge
- **Enlargement** — horizontal: more tasks at same level
- **Rotation** — cross-functional movement
- **High-Performance Work Design** — skilled, team-based, supportive systems
- **Exam move** — choose by what's blocking motivation (challenge? variety? skills?)

● Stretch Goals / Comfort vs Stretch Zone • S4 • Simons ★★★

Goal difficulty calibrates span of influence.

- **Comfort** — attainable, routine; provides stability
- **Stretch** — difficult, near-impossible; drives learning and cross-unit cooperation
- **Exam move** — set stretch goals to widen span of influence in a redesigned role

● Selection-Interview Biases • S6 ★★★

Two named cognitive biases that wreck interview validity.

- **Contrast effect** — judge a candidate against others just interviewed
- **Similar-to-me effect** — favour candidates resembling the interviewer
- **Exam move** — critique fairness; advocate structured interviews and panel scoring

● Employer Brand / EVP • S6 ★★★

Recruitment = a two-way exchange where the firm sells itself too.

- **Employer brand** — the firm's reputation as a place to work
- **EVP** — what employees get in return (pay, growth, culture, purpose)
- **Exam move** — explain why employer-of-choice firms attract better applicants

● Layoff Selection Criteria • S6 ★★★

Five bases for choosing who exits.

- **Seniority** — last in, first out
- **Employer status** — temporary vs core staff
- **Skill** — keep critical capabilities
- **Merit** — performance-based
- **Personal situation** — hardship considerations
- **Exam move** — defend a fair, criterion-based layoff plan (PowerTech India)

Block 3 • Recruitment, Selection, Socialization, Training & Development

● Training Process Model • S10 ★★★★★

Four-part cyclical model for any effective training program.

- **Needs Assessment** — organizational, task, person analysis
- **Design** — objectives, lesson plans, content sequencing
- **Implementation** — methods (classroom, on-the-job, e-learning, simulation)
- **Evaluation** — reactions → learning → behaviour change → results (loops back)
- **Exam move** — diagnose why training fails (skipped a step?); structure any "design a training" answer

● STAR Method • S9 ★★★★★

Behavioural-interview answer formula; the "4 P's" for prep.

- **Situation** — set the scene briefly
- **Task** — define the challenge/objective
- **Action** — *your* specific actions (not "we")
- **Result** — quantifiable outcome + what you learned
- **4 P's** — Polish résumé, Prepare STARs, Prepare questions, Practice
- **Exam move** — defend why behavioural answers must be specific, personal, measurable

● Person–Organization vs Person–Job Fit • S8 ★★★★★

Two selection criteria with very different consequences.

- **P–O fit** — alignment with culture/values/norms; CAN be socialized
- **P–J fit** — KSAOs match the job; HARDER to socialize/retrain
- **Trade-off** — over-selecting for P–O fit → homogeneity → reduced diversity/innovation
- **Exam move** — defend the right mix; cite Spencer Stuart for measuring P–O fit

● Recruitment & Selection Process • Armstrong (Ch24) • S7–S8 ★★★★★

End-to-end arc from defining the role to handling problems.

- **Steps** — define requirements → attract candidates → process applications → select (interviews + tests) → decision → references → offer → onboarding
- **Recruitment problems** — shortages, mismatched expectations, biased screening
- **Exam move** — the spine of any recruitment essay; map each session's content onto a step

● Judge et al. (2007) Meta-Analytic Path Model • S8 ★★★★★

The empirical hierarchy of performance predictors.

- **Strongest predictors** — general mental ability, conscientiousness, experience
- **Mediator** — self-efficacy
- **Exam move** — defend cognitive ability tests + conscientiousness over interviews/grades

● Big Five / OCEAN • S8 ★★★★★

Five-factor personality model used as a selection test.

- **Openness** — curiosity, creativity
- **Conscientiousness** — discipline, reliability → strongest job-perf predictor
- **Extraversion** — sociability
- **Agreeableness** — cooperation, trust
- **Neuroticism (Emotional Stability)** — calm under stress
- **Exam move** — pair with Judge et al.; the Fuzzme! sim uses it

● Three Phases of Selection • S8 • Fisher, Schoenfeldt & Shaw (2014) ★★★★★

Phase model for executing and validating selection.

- **Phase 1 — Measurement** — accuracy and consistency of techniques
- **Phase 2 — Decision making** — completeness of candidate data
- **Phase 3 — Evaluation** — assess the process from the org's perspective
- **Exam move** — frame to audit a broken selection system

● Spencer Stuart Culture Alignment • S8 ★★★★★

8-style culture map on two axes.

- **Axes** — independence ↔ interdependence; flexibility ↔ stability
- **Styles** — Learning, Purpose, Caring, Order, Safety, Authority, Results, Enjoyment
- **Exam move** — plot candidate vs org to measure P-O fit; redesign culture by shifting axes

● Three Domains of Socialization • S10 ★★★★★

Onboarding works in three layers.

- **Organization** — values, mission, policies, history
- **Group/Department** — supervisor expectations, peer norms, team expertise
- **Task** — responsibilities, performance expectations, resources/tools
- **Exam move** — diagnose onboarding failures by which domain was skipped

● Situational vs Behavioral Questions • S9 ★★★★★

Same as Block 2 framework — typology of structured question types.

- **Situational** — hypothetical, "What would you do if...?"
- **Behavioral** — past, "Tell me about a time when..."
- **Exam move** — match by candidate experience level

● Socialization Strategies (Sequential/Individual/Collective) • S10 ★★★★★

Typology of onboarding delivery.

- **Sequential** — predetermined timing, stages, duration
- **Individual** — one-to-one (e.g. supervisor → new hire)
- **Collective** — group cohort training at start
- **Exam move** — collective builds cohort bonds; individual gives tailored attention

● Job Description vs Job Specification • S7 ★★★★★

The recruiting starting point — same pairing as Block 2.

- **Description** — duties, environment, reporting
- **Specification** — KSAOs, qualifications, traits
- **Exam move** — without them, recruitment has no criteria

● Internal vs External Recruitment Sources • S7 ★★★

Source-choice trade-off.

- **Internal** — promotions, referrals → cheap, culturally aligned, motivating; but creates a new vacancy
- **External** — ads, agencies, social media → fresh skills/ideas; costlier, no track record
- **Exam move** — choose by strategy (build-vs-buy) and position level

● Validity & Reliability of Tests • S8 • Armstrong ★★★

Psychometric requirement for any selection test.

- **Validity** — does it predict the outcome it claims to?
- **Reliability** — does it give consistent results across raters/times?
- **Test types** — intelligence, personality, aptitude
- **Exam move** — defend dropping a popular-but-invalid test

● Structured vs Unstructured Interviews • S8 • Armstrong ★★★

Validity verdict from the meta-analyses.

- **Structured** — standardized questions, scoring rubric → highest validity among interviews
- **Unstructured** — chat-style → poor predictor (per Cappelli, 2019)
- **Exam move** — defend a structured + panel + scoring rubric

● Employer Brand & EVP • S7 • Armstrong ★★★

"Employer of choice" framing.

- **Two-way** — candidates buy *and* sell
- **Exam move** — show that recruitment competitiveness depends on brand

● Training vs Development • S10 ★★★

Conceptual split for learning interventions.

- **Training** — KSAs for *current* job
- **Development** — preparation for *future*, broader, higher-level roles
- **Exam move** — scope a learning plan; argue for both

● Kirkpatrick-style Training Evaluation Levels • S10 ★★★

Four levels for assessing training impact.

- **Reactions** — did they like it?
- **Learning** — pre/post knowledge tests
- **Behavior** — applied on the job?
- **Results** — org performance / ROI / cost-benefit
- **Exam move** — push past Level 1 reactions to prove training works

Block 4 · Performance Management & Appraisal

● Performance Management Cycle · S11-S14 · Aguinis et al. (2009) ★★★★★

PM = continuous process of identifying, measuring and developing performance + aligning it with strategy.

- **MOA logic** — Motivation × Opportunity × Ability
- **Three pillars** — Identify (what to measure) → Measure (how) → Develop (feedback + growth)
- **Two uses** — administrative (pay, promotion, layoffs) vs developmental (coaching, growth)
- **Exam move** — the organizing model of Block 4; frame any PM design question on this spine

● Appraisal vs Management · S11-S12 · Aguinis, Joo & Gottfredson (2011) ★★★★★

The central distinction. Appraisal = once a year. Management = ongoing.

- **Appraisal** — annual, HR-driven, past-focused, administrative, form-filling
- **Management** — continuous, line-manager-owned, future-focused, strategic, coaching
- **"Why we hate PM"** — most systems do appraisal, call it management, satisfy nobody
- **Exam move** — diagnose any "PM hate" symptom by which pole the system slid to

● Forced Distribution / Relative Ranking · S12 · Vitality Health ★★★★★

Force raters to allocate employees into a fixed-percentage bell curve.

- **Fixes** — eliminates leniency/inflation, forces differentiation
- **Risks** — destroys team cohesion, can be unfair in high-talent teams
- **Vitality Health categories** — Top Achiever / Achiever / Low Achiever / Unacceptable / Not Rated
- **Exam move** — defend or attack based on culture + maturity of raters

● Vitality Health Revised PM · S12 · Bingham & Beer (case 913-501) ★★★★★

The case redesign: shift from 13-level absolute ratings to forced-distribution + competencies + SMART.

- **Old** — 13 absolute rating levels, ratings inflated, no differentiation
- **New** — relative ranking (T/A/L/U/NR) + job-specific competencies + SMART objectives + common January cycle + short/long-term cash + equity
- **Exam move** — the canonical "PM redesign" case; cite for any incentive + rating redesign

● 360-Degree Feedback · Alex Sander · Aguinis ★★★★★

Multi-source feedback: supervisor + peers + reports + sometimes customers.

- **Strengths** — richer picture, surfaces blind spots, signals fairness
- **Risks** — contextually unsafe in low-trust cultures; consumes time
- **Exam move** — defend 360 only where culture supports honest peer feedback (Alex Sander = it didn't)

● Three Indicators of Performance • S11 ★★★★★

What can be measured: traits, behaviors, outcomes.

- **Traits** — enduring characteristics; must fit the job (risky for bias)
- **Behaviors** — observable actions on the job
- **Outcomes** — results delivered
- **Exam move** — defend the right blend (e.g. outcomes alone misses how; behaviors alone misses results)

● BARS • S11 ★★★★★

Behaviorally Anchored Rating Scales: each numeric level is anchored to a critical-incident behavior.

- **Build** — collect critical incidents → scale them → use as anchors
- **Strength** — concrete, behavior-based, low rater drift
- **Cost** — expensive to develop per job
- **Exam move** — cite as the gold-standard subjective method

● Management by Objectives (MBO) • Ch10 • S13 ★★★★★

Manager + employee jointly set specific objectives; evaluation = attainment vs objectives.

- **Process** — joint goal-setting → ongoing review → year-end evaluation
- **Exam move** — outcomes-based PM; pair with [[smart-goals]]

● SMART Goals • S13 ★★★★★

Goal-setting acronym.

- **Specific** • **Measurable** • **Attainable** • **Relevant** • **Time-bound**
- **Exam move** — the operational tool when managing low performers; pair with [[mbo]]

● Absolute vs Relative Judgment • S11 • S12 ★★★★★

Two appraisal logics; pick by your differentiation problem.

- **Absolute** — rate against fixed standards; no comparison
- **Relative** — rank-order or forced-distribute among employees
- **Exam move** — Vitality moved absolute → relative to break rating inflation

● Blake & Mouton's Managerial Grid • S13 ★★★★★

9×9 grid: concern for people × concern for task.

- **Five styles** — Impoverished (1,1), Country Club (1,9), Authority-Compliance (9,1), Middle-of-the-Road (5,5), Team Management (9,9)
- **Exam move** — frame coaching-low-performer trade-offs

● SBI-Next Feedback Framework • S14 ★★★

Structured behavior-focused feedback.

- **Situation** — when/where it happened
- **Behavior** — what you observed (no inference)
- **Impact** — effect on you / team / outcome
- **Next** — agreed next step
- **Exam move** — concrete tool for the McDonald's / peer-feedback role-plays

● Rating-Error Typology • Ch10 ★★★

Systematic cognitive biases that distort subjective ratings.

- **Halo** — one trait colors all ratings
- **Leniency / Severity** — rater too soft or too hard
- **Central tendency** — clusters everyone in the middle
- **Contrast** — judging vs others just rated
- **Recency** — over-weights last few months
- **Similar-to-me** — favors people like the rater
- **Fix** — frame-of-reference training
- **Exam move** — show why subjective ratings need rater training

● Relevance-Deficiency-Contamination • Ch10 • S11 ★★★

Measurement-quality framework for any performance metric.

- **Relevant** — captures true performance
- **Deficient** — misses important aspects (false negative)
- **Contaminated** — captures irrelevant variance (false positive)
- **Plus** — reliable, valid, practical
- **Exam move** — audit any KPI with the Venn diagram

● Mixed Standard Scale • Ch10 • Blanz & Ghiselli (1972) ★★★

Mixed good/avg/poor behavioral statements; scored via key to reduce bias.

- **Exam move** — alternative subjective rating format; flag when standard rating scales drift

● Comparative Procedures • Ch10 ★★★

Family of relative rating methods.

- **Simple ranking** — order all employees
- **Alternation ranking** — pick best, then worst, alternating
- **Paired comparison** — compare every pair
- **Forced distribution** — bell curve
- **Exam move** — choose by team size and rater patience

● **Behavioral Observation Scales (BOS) • Ch10** ★★★

Rate the frequency with which each effective behavior is performed.

- **Score** — sum of frequencies per behavior
- **Exam move** — variation on BARS, simpler to use day-to-day

● **Deloitte's Reinvented PM • S11 (HBR video)** ★★★

Real-world redesign: kill ratings; weekly check-ins + four future-focused statements.

- **The four statements (per employee)**
 - I would always want this person on my team
 - I would give this person the highest possible compensation increase
 - This person is at risk of low performance
 - This person is ready for promotion today

- **Exam move** — cite as practitioner example of moving appraisal → management

Block 5 • Compensation, Incentives, Benefits & Employment Relations

● **The Pay Model • S15 • Milkovich, Newman & Gerhart (Ch1)** ★★★★★

The foundational diagnostic: objectives → policy choices → techniques.

- **Objectives** — efficiency, fairness, ethics, compliance
- **Four policy choices** — internal alignment, external competitiveness, employee contributions, management
- **Techniques** — job analysis, surveys, pay structures, performance-based pay, communication
- **Exam move** — diagnose any pay system as objective-fit + policy-fit + technique-fit

● **Total Returns / Total Compensation • S15 • Ch1** ★★★★★

Reward = cash + benefits + relational/psychological returns.

- **Total Compensation (transactional)** — base, merit/COLA, short- and long-term incentives, benefits
- **Relational/Psychological Returns** — recognition, employment security, challenging work, learning, leadership opportunities
- **Exam move** — argue that pay alone is a thin lever; design the whole "return mix"

● Four Criteria of a Competitive Compensation System • S15 • Ch1 ★★★★★

Operational tests for the Pay Model's policy choices.

- **Internal equity** — equal pay for jobs of equal worth (via job analysis + evaluation)
- **External equity** — at par with industry (via salary surveys)
- **Performance link** — pay tied to performance
- **Cost/benefit** — affordable, returns measurable
- **Exam move** — score any system on these four; pinpoint which is failing

● Pay-for-Performance • S15 • BAG • Zero Wage cases ★★★★★

Link pay to performance, distinguishing merit increases (permanent) from incentives (variable).

- **Merit increases** — add to base pay; reward past behavior; permanent → cumulative cost
- **Incentives** — re-earned each period; specified in advance; reward future behavior
- **Exam move** — defend variable pay (incentives) vs sticky merit (BAG Grocers); when to use which

● Incentive Effect vs Sorting Effect • S15 • Gerhart & Rynes ★★★★★

Pay shapes performance two ways — through current employees AND who you attract.

- **Incentive effect** — pay motivates the people you already have
- **Sorting effect** — pay structures attract/retain different types of employees (self-selection)
- **Evidence** — 44% productivity rise in glass-installation study, mostly from sorting
- **Exam move** — argue pay design changes *who* you have, not only how hard they work

● Types of Incentive Plans • S15 ★★★★★

Classify by level of aggregation.

- **Individual** — commissions, bonuses, awards, piece-rate
- **Group** — team bonuses, gain-sharing
- **Organization** — profit-sharing, ESOPs, stock options
- **Exam move** — match plan to what behavior you want to incentivize (individual vs team vs firm)

● Pay Structure Types • S16 ★★★★★

Three structural shapes for pay grades.

- **Narrow-graded** — many grades, multiple step progressions
- **Broad-graded** — few grades, long within-grade progression (broadbanding)
- **Job family** — pay based on occupational category, family-specific ranges
- **Exam move** — frame for the salary-negotiation activity; broadbanding fits flatter orgs

● Varieties of Capitalism · S16 · Hall & Soskice (2001) ★★★

Comparative institutions: why pay/labor practices vary by country.

- **Coordinated Market Economies (CMEs)** — higher unionization, extensive legislation, institutional collaboration (Germany, Nordics)
- **Liberal Market Economies (LMEs)** — lower unionization, hierarchical coordination, less legislation (US, UK)
- **Exam move** — explain why "the right" pay system is country-specific

● Direct vs Indirect Compensation · S15 ★★★

Maps the full pay mix beyond cash.

- **Direct** — basic pay, variable pay, profit-sharing
- **Indirect monetary** — health insurance, pension
- **Indirect non-monetary** — telecommuting, flexi-hours, childcare
- **Exam move** — defend the full mix when challenged on "just raise base pay"

● Likelihood-to-Unionize Matrix · S16 ★★★

2x2: benefit of unionizing × ability to organize.

- **High-High** — blue-collar, public sector → most likely to unionize
- **Low benefit / high ability** — white-collar
- **High benefit / low ability** — gig, temporary workers
- **Low-Low** — self-employed
- **Exam move** — predict where unionization will rise next

● Caveat Emptor — Informed Consumer · Ch1 (Circuit City) ★★★

Three-question critical-appraisal model for any compensation claim.

- **Useful?** — does the finding apply to my context?
- **Correlation ≠ causation?** — is there a true causal link?
- **Alternatives?** — what other explanations fit the data?
- **Exam move** — apply to any "compensation X drives Y" claim

● WorldatWork Total Rewards Model · Ch1 (footnote 28) ★★★

Industry-standard parallel to Total Returns.

- **Five buckets** — compensation, benefits, work-life, performance/recognition, development/career
- **Exam move** — cite as practitioner version of [[total-returns]]

Block 6 · Unions, Collective Bargaining & Labor Relations

● Union Wage Effect & Feedback Effects · Pfeffer / Freeman & Medoff ★★★★★

Unions raise wages — but higher wages don't necessarily lower profits or competitiveness.

• Indirect/feedback effects

- higher wages attract more skilled workers
- reduce turnover
- push firms to economize on labor (capital, training)
- raise productivity

- **Boundary condition** — union profit-effects matter mainly where firms hold monopoly power
- **Exam move** — defend that the wage-vs-profit trade-off is overstated; cite the feedback mechanisms

● Unions & High-Commitment Work Systems · Pfeffer ★★★★★

Unionization is positively associated with HPWS — and makes them durable.

- **Mechanism** — contracts lock in training, teams, job security, info sharing → prevent "backsliding"
- **Cases** — Ford, Saturn (GM), Kaiser-Permanente
- **Exam move** — flip the conventional wisdom that unions kill HPWS; unions can entrench them

● High Road vs Low Road Strategy · Pfeffer ★★★★★

Two competitive paths; only one is sustainable in advanced economies.

- **Low road** — compete on low labor costs (unwinnable vs developing economies)
- **High road** — compete on innovation, productivity, brainpower via HPWS
- **Exam move** — argue unionization makes the high road more likely and sustainable

● "Management Gets the Union It Deserves" · Pfeffer ★★★★★

The conventional-wisdom claim Pfeffer sets up to dismantle.

- **Claim** — progressive HR practices forestall unionization; if you're unionized, you failed at HR
- **Pfeffer's challenge** — even good HR doesn't make unions redundant; unions add complementary protections
- **Exam move** — use as the thesis to argue against; the structure of any pro-union essay

● Collective Bargaining as Power-Sharing · Pfeffer ★★★★★

Bargaining = institutionalized communication + joint decision-making with front-line staff.

- **Outcomes when collaborative** — lower hospital mortality (unionized nurses); Kaiser-Permanente partnership
- **Outcomes when adversarial** — gains shrink, both sides lose
- **Exam move** — defend partnership-style labor relations over adversarial bargaining

● Union Effect on Wage Distribution • Pfeffer ★★★

Unions compress the wage structure → less inequality + less discrimination.

- **Mechanism** — egalitarian ethos needed for collective action
- **Bonus** — wide pay dispersion tends to harm performance
- **Exam move** — answer "what about inequality?" — unions are part of the solution

● Collective Bargaining Process • Tepperman's case ★★★

The structured negotiation arc, from positions to ratification.

- **Negotiation committee** — union stewards + business agent (union side); management + legal counsel (firm side)
- **Process** — opening positions → bargaining → tentative agreement → ratification vote (majority)
- **Failure path** — if rejected (Tepperman's: 23–4) → renegotiate or strike
- **Exam move** — diagnose why a tentative deal failed ratification (member buy-in?)

Cross-block patterns — the debates that write themselves

● Hard vs Soft HRM — Michigan ↔ Harvard

- **Hard** (Michigan) — instrumental, shareholder-driven, matching model
- **Soft** (Harvard) — multistakeholder, developmental, Four C's
- **Exam move** — open any "philosophies of HRM" essay with this dialectic

● Annual Appraisal ↔ Continuous Management

- **Aguinis (2011) "Why we hate PM"** — the central case for moving the dial
- **Deloitte** — the practitioner exemplar
- **Vitality Health** — the case where ratings *still* matter
- **Exam move** — argue for hybrid, not either-or

● Pay as Motivator ↔ Pay as Selector

- **Incentive effect** — motivates the people you have
- **Sorting effect** — changes *who* you attract
- **Exam move** — cite Gerhart & Rynes when challenged "but money doesn't really motivate"

● Engagement Bright Side ↔ UPB Dark Side

- **Engagement model + ToMo** — the upside
- **Unethical Pro-Org Behavior** — the downside of strong commitment
- **Exam move** — show the limits of "more engagement = better"

● Unions: Conventional Wisdom ↔ Pfeffer

- **Conventional** — unions raise costs, kill flexibility, forestalled by good HR
- **Pfeffer** — unions support HPWS, sustain the high road, compress inequality
- **Exam move** — the dialectic of any unions essay

Caveat

The colour code (● Core / ● Key / ● Supporting) is a memory hook based on weight in slides + readings. Importance shifts with the exam question — a "Supporting" framework can be the killer cite if the prompt happens to be about it. Don't let the colour decide what you actually write.
